GRASS SEED +FERTILIZER

Pennington's NexGen Turf Research is the largest private grass seed research facility in the United States.

We lead the industry in developing top-performing, water-conserving, sustainable seed. Once established, our purebred, drought-tolerant Smart Seed® grasses require up to 30 percent less water than ordinary grass seed. That's year after year, for the life of your lawn. Plus, our advanced, fertilizer-enhanced seed coat technology speeds establishment and promotes greener grass. Born from Pennington innovation and NexGen breeding and research, Smart Seed brings you better seed, better sustainability and better results.

IS SUN AND SHADE THE RIGHT SEED FOR YOUR LAWN?

Lawn grasses vary in the amount of sunlight they need to stay healthy. If some of your lawn receives sun and other parts receive moderate shade, Pennington® Smart Seed® Sun & Shade offers the perfect mixture for Southern conditions.

WHERE WILL THIS **SEED GROW BEST?**

Ideal planting zone in highlighted area

WHEN SHOULD THE **SEED BE PLANTED?**

Early Spring or early Fall

STEP 1 **NEW LAWNS** OVERSEEDING

 $\frac{\times}{\Sigma}$

PREPARE

FOR BARE SPOTS/NEW LAWNS: Remove debris, then rake the soil to loosen and smooth the top layer.

PARA ZONAS CON HUECOS O CÉSPED NUEVO: Retire los desechos y luego rastrille la tierra para

FOR OVERSEEDING/THIN AREAS:

Start by mowing existing grass as short as possible followed by removing debris. Then rake the soil to loosen and smooth the top layer.

PARA RESIEMBRA O ZONAS DELGADAS: Corte el césped existente lo mas corto sea posible y elimine los desechos. Luego, rastrille la tierra para aflojar y suavizar la capa superior.

APPLY

Spread the seed evenly using a drop, rotary or hand-held spreader according to the recommended spreader settings listed. Rake gently to work your seed and fertilizer into the soil.

APLICACIÓN: Disemine las semillas de manera uniforme con un esparcidor de caída, rotativo o manual, de acuerdo con las configuraciones recomendadas y enumeradas del esparcidor. Rastrille suavemente para que las semillas y el fertilizante germinen en la tierra.

WATER

Keep the soil moist by watering daily as needed until grass sprouts and reaches about 3" tall.

RIEGUE: Mantenga la tierra húmeda al regar lo que sea necesario por día hasta que el césped brote y alcance alrededor de 3 pulgadas (7,62 cm) de alto.

ADDITIONAL CARE TIPS

Avoid removing more than 1/3 of the total grass blade length in any single mowing

Hot summers can be stressful on your lawn; increase the

mowing height during hot and dry periods to reduce stress on your lawn

MOST IMPORTANTLY - Don't kill the grass before it starts by using weed control (pros call it preemergent) on your lawn until your grass has reached its full mowing height of 3"

RECOMMENDED SPREADER SETTINGS		
SPREADER TYPE	OVERSEEDING/ THIN AREAS	BARE SPOTS/ NEW LAWNS
