C×2

D×2

1

Using a small hammer, tap the flat side of part #1 (flat side up) so that the circular slot in part #1 is completely inside the hoist hole in part #4 (as shown), and note that the hoist hole in part #4 has the large opening facing up and the small opening facing down.

Install the other lower side frame in the same way, taking care to keep the installation height consistent

2

Using a small hammer, tap the flat surface of part #1 (with the flat surface facing up) so that the circular slot in part #1 is completely inside the hoist hole in part #4 (as shown), and note that the hoist hole in part #4 has the large opening facing up and the small opening facing down.

Install the other lower side frame in the same way, taking care to keep the installation height consistent

3

4

Install 3, part #2 in the same way.

Using a small hammer, tap the flat side of part #2 (flat side up) so that the circular slot in part #2 is completely inside the hoist hole in part #4 (as shown), and note that the hoist hole in part #4 has the large opening facing up and the small opening facing down.

5

 **B×4**

6

7

Snap part #1 into the hoist holes on the lower part of part #4 and the upper part of part #4 respectively. And tap them flat with a small hammer

8

Snap part #2 into the hoist holes on the lower part of part #4 and the upper part of part #4 respectively. And tap them flat with a small hammer

Install the remaining part #2 (connect in the same manner)

9

 C×2

10

This step is to connect the cabinet to the wall, if you do not need to ignore it
