1. Determine desired shower seat location and seat configuration.

## SEAT CONFIGURATION

Determine desired location for the shower seat and corresponding seat configuration; left or right.

## 2. Mounting the seat top to the frame.

Mount the seat top to the frame in the desired configuration.

Using four (4) ¼"-20 x 2" Phillips Flat Head machine screws and (4) ¼"-20 Nylon Lock Nuts (supplied by manufacturer), secure the seat top to the frame. Torque screws to 20 ft-lbs.

## 3. Determine seat height from the floor and location relative to the inside back wall.

*ADA regulations specify a finished seat height 17" to 19" above the finished floor and 1-1/2" clearance between the seat edge and the inside back wall.*

Place the seat in an upright position with the mounting flanges placed firmly against the shower wall.

Level the seat by changing the adjustable rubber feet to the desired mounting height (17"-19"). Tighten the lock nuts.

With the mounting flanges placed flush against the wall, mark the position of the three holes in each flange. Using a 1/8" Carbide tip drill bit (not provided), create three mounting holes each for the right and left mounting flanges.

Use clear silicone sealer at each hole location to prevent water damage to existing structures as desired.

#### 4. Mounting the seat to the wall.

Holding the seat assembly in the down position, make any necessary final adjustments to the adjustable rubber feet. With the feet resting firmly on the floor, tightly secure the two mounting flanges to the wall **AND INTO 2" THICK, SOLID WOOD IN-WALL BACKING MATERIAL**, using six (6) #12 x 2-1/2" stainless steel screws (supplied by manufacturer). *Tighten screws completely **AFTER** all screws are in place.*

#### 5. Check Seat for:

- 1) Proper up and down operation.
- 2) Correct finished height.
- 3) Correct distance from wall.
- 4) Weight bearing.
