ALUMINUM

Modern Shelving Products has several machined and cast aluminum components. Most of the aluminum alloys used today contain some level of lead, usually less than .1%. Lead is known to the state of California to cause cancer and reproductive harm. Most aluminum alloys are physiologically inert in their solid form and the lead is safely contained within, however user-generated dust and/or fumes may pose a hazard if inhaled or ingested. Heating beyond a certain temperature may also provide avenues for exposure.

7429-90-5 Aluminum

POWDER COATING (if applicable to color choice)

Powder Coating is an applied coating that contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Only when in respirable particle form but not when they are bound in a hardened film.

13467-67-7 Titanium Dioxide

1333-86-4 Carbon Black
