

## Use and Care Manual

**Dusting:** Dust your light fixtures regularly. Dust and dirt can accumulate over time and not only look unsightly but also dim the light emitted from your fixtures.

**Cleaning:** Always turn off the fixture and allow bulbs to cool before cleaning. Use a soft, dry cloth to wipe down bulbs and fixtures. For more stubborn grime, slightly dampen the cloth, but avoid getting water near any electrical parts. If your fixture has removable glass parts, you can usually clean these with soap and water.

**Regular Inspections:** Regularly check your light fixtures for any signs of damage, such as frayed wires or loose connections. If you find anything that seems off, it's always safest to call in a professional.

**Bulb Replacement:** Always replace bulbs with the appropriate wattage and type for your particular fixture. Using incorrect bulbs can damage the fixture and potentially pose a safety risk.

**Professional Maintenance:** For more complex fixtures, like chandeliers or recessed lighting, you might need to call in a professional for routine maintenance. They can ensure everything is working properly and safely.

**Switch-Off Lights:** To increase the lifespan of your fixtures and bulbs, turn off the lights when they are not in use. This will also save you electricity.

Remember, when dealing with any electrical fixtures, safety should always be your first priority. If you are ever unsure about how to maintain or repair a light fixture, it's best to call a professional.
