

daltile®

PORCELAIN SURFACES

Daltile Porcelain Surfaces is a beautiful, durable, and resilient surface suitable for walls, countertops, and flooring. Regular, gentle cleaning is the best way to keep your investment in tip-top condition.

To clean Daltile Porcelain Surfaces countertops, wipe up spills as they occur with a damp, soft sponge.

For stubborn cleanups, use gentle liquid cleaners like

- Mr. Clean, 409 or Simple Green as directed on the bottle. If extra stubborn spots remain, use a toothbrush dipped in the solution to loosen heavier soil. Rinse a sponge well, wipe the cleaning solution off the countertop. Follow with a clean, damp cloth, and allow it to dry.
- Never use a sponge that contains aluminum oxide. This includes red or green Scotch Brite sponges. Aluminum oxide can dull the finish of premium surfaces including porcelain, granite, quartz, and marble.
- Never use steel wool, scrub brushes, or hard bristle brushes on Daltile Porcelain Surfaces.
- Never use abrasive cleaning agents including Comet, Ajax, or Soft Scrub to clean Daltile Porcelain Surfaces.
- Never use harsh chemical cleaners including drain cleaners, paint strippers, or products containing Hydrofluoric Acid, Methylene Chloride or Trichloroethylene. These harsh chemicals can etch or discolor Daltile Porcelain Surfaces.
- While Daltile Porcelain Surfaces are scorch and heat resistance, it is recommended to use hot pads under heat generating appliances including slow cookers, deep fryers, and electric skillets. This helps protect against thermal expansion that occurs with a rapid change of temperature or sustained heating.
- Sealing Daltile Porcelain Surfaces is not necessary.
