

Van Zyverden's
GMO FREE ASPARAGUS JERSEY KING

Asparagus is a long lasting perennial, and the first vegetable harvested each spring. It is prized for its flavor, is rich in vitamins and minerals, and is only 30 calories per cup. Compare this to the grocery price of fresh Asparagus, and you can easily justify the effort of growing your own. Fun Fact: 12 crowns should provide enough fresh asparagus for one person for the season. Plant more if you are planning on freezing or canning the spears.

Grow your own

GMO Free

*Best spear quality
of all Jersey varieties*

About This Variety: Jersey hybrid varieties often produce the highest yields, much greater than older varieties and are disease tolerant. This variety also does well in warmer climates. A very good home garden choice!

Growing Instructions: Care should be taken to find a spot that will receive at least 8 hours of sunlight in a well drained area that can be deeply dug (8-10") to properly plant your asparagus. Growing conditions should be given the greatest of consideration since the bed will be more or less permanent, maybe at the edge or end of the garden.

Care Tip: For ideal growing plant asparagus in trenches four feet apart. Fertilization recommended (triple superphosphate applied during planting) and keep the bed weed free.

Exposure: Partial shade

Height: Grows 4-5' tall

Spacing: Plant 12-18" apart, 2" deep

Hardy in: USDA zones 9-11

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
