

**STEP1** Pump must be installed in a suitable basin that is at least 24 inches deep and 11 inches wide for pumps fitted with vertical on/off switches.

**STEP2** Pump must be placed on a hard surface in a sump that has been cleared of all debris. Never place the pump on clay, earth or gravel surfaces.

**STEP3** Pump will automatically activate with 7 – 10 inches of water in basin.

**STEP4** Pump will turn off when water level reaches 2 – 5 inches.

**STEP5** Connect the discharge pipe, fittings and check valve to the discharge port of the pump. It is recommended that the discharge pipe diameter should be equal to or larger than the discharge size of pump.

**STEP6** Plug into GFCI protected electrical outlet.
